

Filtered Repository Portfolio

Bruno DELNOZ - bdelnoz technical production snapshot

Generated: 2026-05-05 13:49

Scope: selected repositories from the filtered list provided in the chat. The report emphasizes technical domains, technologies used, documentation reliability, and portfolio value.

Important: low-confidence entries need script-level verification before being used in a public LinkedIn post.

Executive summary

This report covers 54 repositories from the filtered list. It is intended as a portfolio preparation document, not as a raw GitHub inventory. It focuses on what each project demonstrates: automation, security engineering, Linux/Kali operations, local AI workflows, multimedia processing, browser integration, repository governance, storage diagnostics, and Raspberry Pi experimentation.

Main technology families: Shell/Bash, Python, FastAPI, Git/GitHub CLI, iptables, systemd, hostapd, dnsmasq, ffmpeg, whisper.cpp, JavaScript browser extensions, Raspberry Pi tooling, QEMU/KVM, cryptsetup/LUKS, OpenSSH, Textual/Rich.

Confidence rule: High means the repository had usable README/WHY/specification material already inspected in the conversation. Low means the README was missing, title-only, or metadata-only and should not be over-sold before reading scripts locally.

Repository overview table

Project	Category	Technologies	Conf.	Portfolio use
allbrowserinstallkali	Web / Linux tooling	Shell, Kali Linux, browser install automation	Medium	Supporting utility
analyseBrave	System / Browser diagnostics	Shell, Linux process/browser inspection	Low	Needs script-level reading
analyseProcess	System diagnostics	Shell, Linux process inspection	Low	Needs script-level reading
braveVTTextension	Local AI / Browser extension	JavaScript, Brave/Chromium Extension, Manifest V3, whisper.cpp, Shell	High	Strong portfolio item
braveVTTextension_en	Local AI / Browser extension	JavaScript, Brave/Chromium Extension, Native Messaging, whisper.cpp	High	Strong portfolio item
catall	Utility / Documentation support	Shell likely	Low	Needs script-level reading
checkdeepdisk	Storage diagnostics	Shell, disk tools, SMART/read checks	High	Strong portfolio item
cmd.airmon-to-dos	Wi-Fi security auditing	Shell, Aircrack-ng, airodump-ng, deauthentication test workflows	High	Strong portfolio item
cmd.disable_brol_notneed	Linux cleanup / System tuning	Shell likely, Linux services	Low	Needs script-level reading
ColtSivers	AI project bootstrap / Architecture	Python, Pipenv, Shell, structured project layout	High	Strong portfolio item
compressvideo	Multimedia utility	Shell, ffmpeg likely	Low	Supporting utility
convdocx	Documentation automation	Shell, Pandoc, Python helper	High	Strong portfolio item
cpx	Utility / File operations	Shell likely	Low	Needs script-level reading
create_gitignore	Developer tooling	Shell, template-driven .gitignore generation	High	Strong utility item
create_luks	Security / Storage encryption	Shell, cryptsetup/LUKS likely	Low	Needs script-level reading
create_repo	GitHub automation	Shell, Git, GitHub CLI	High	Strong portfolio item
dashboard	Linux monitoring / TUI	Python, Textual, Rich, psutil, Shell, systemd	High	Strong portfolio item
DeepEcho	Audio / AI experiment	Unknown from README	Low	Needs script-level reading
DeepEcho_whisper	Local AI / Transcription	Shell, Python, whisper.cpp, OpenAI Whisper, ffmpeg, C/C++ build tooling	High	Strong portfolio item
diff_files_not_copied	File integrity / Backup support	Shell likely	Low	Needs script-level reading
findgit	Git utility	Shell likely, Git filesystem discovery	Low	Needs script-level reading
firefoxVTTextension	Local AI / Browser extension	JavaScript, Firefox Extension, whisper.cpp, Shell	High	Strong portfolio item
init_project	Project bootstrap / Local AI services	Shell, Pipenv, FastAPI-ready Python layout	High	Strong utility item
iptables	Linux firewalling	Shell, iptables, systemd	High	Strong portfolio item
jeronimo	Network scanning containment	Shell, Nmap, Zenmap, iptables owner match, systemd, sudoers	High	Strong portfolio item
kali-deep-analyse-timeframe	Forensics / Log analysis	Shell/Python likely, Linux logs, timeline reconstruction	High	Strong portfolio item
ManInTheMiddle	Network security lab / Traffic capture	Shell, hostapd, dnsmasq, iptables, systemd, Linux networking	High	Strong portfolio item

Project	Category	Technologies	Conf.	Portfolio use
mountVG	Storage / LVM helper	Shell, LVM/LUKS likely	Low	Needs script-level reading
mp4_to_images_per_second	Multimedia utility	Shell, ffmpeg likely	Low	Supporting utility
non_destructive_ntfs_audit	Storage diagnostics / Evidence collection	Shell, smartctl, lsblk, dd, hdparm, hashing, NTFS tools	High	Strong portfolio item
NoXoZ4Hunt	AI project bootstrap / Recruitment workflow	Shell, Python/FastAPI bootstrap	Medium	Useful but early-stage
NoXoZVorteX	AI conversation analysis	Python, JSON processing, Mistral API optional, tiktoken, CSV/TXT reports	High	Strong portfolio item
NoXoZVorteX_prompted_en	Prompt-based AI analysis	Python, Mistral API, prompt templates, JSON/CSV/TXT/Markdown exports	High	Strong portfolio item
Overlook_record_cam	Multimedia capture / Evidence recording	Shell, ffmpeg, ImageMagick, PulseAudio, X11	High	Strong portfolio item
poc_mistral	AI proof of concept	Unknown / empty repository	High	Do not highlight
purgeaudio	Audio cleanup	Shell likely	Low	Needs script-level reading
QEMU-tapo	Virtualization / Android testing	Shell, QEMU, KVM, Android-x86/BlissOS workflow	High	Strong utility item
raspberry	Raspberry Pi / Kali ARM setup	Shell, Kali ARM SD card configuration, secrets handling	High	Useful portfolio item
raspberry-bt-scan	Bluetooth / Raspberry Pi	Shell likely, BlueZ tools likely	Low	Needs script-level reading
raspberry-micro	Audio monitoring / Raspberry Pi	Shell, ALSA/audio tools, Linux CLI	High	Strong utility item
raspberry-multiboot	Raspberry Pi multiboot	Shell, U-Boot, QEMU, Linux partitioning, distro configs	High	Strong portfolio item
raspberry-post-install	Raspberry Pi post-install	Shell likely	Low	Needs script-level reading
raspberry-scanbt	Defensive Bluetooth monitoring	Shell, BlueZ, bluetoothctl, btmgmt, btmon, bluelog	High	Strong portfolio item
raspberry-utils	Raspberry Pi utility	Shell	Medium	Supporting utility
RikHunter	Local-first AI platform	Python, FastAPI, Uvicorn, SQLite, ChromaDB, Docker Compose, optional Ollama	High	Strong portfolio item
rtl88x2bu-kali-driver-tools	Kernel/driver operations	Shell, DKMS/kernel module workflow, initramfs-related validation	High	Strong portfolio item
scan_security	Security scanning	Shell likely	Low	Needs script-level reading
scripts-wifi-scan	Wi-Fi discovery	Shell, Aircrack-ng, airodump-ng	High	Strong utility item
speechbrave	Speech/browser experiment	Unknown from README	Low	Needs script-level reading
ssh_hardening	Linux hardening / SSH access control	Shell, OpenSSH, systemd, iptables, sudoers	High	Strong portfolio item
syncgit	Git automation / DevOps	Shell, Git, GitHub CLI	High	Strong portfolio item
usb_enc	Storage encryption / USB operations	Shell, fdisk, cryptsetup/LUKS, ext4, mount/umount	High	Useful but safety-sensitive
voicelogin	Authentication research / Local biometrics	Python, Shell, PAM, LightDM, XFCE, SpeechBrain, Argon2id, Linux audio stack	High	Strong portfolio item
wlaninfo	Wi-Fi diagnostics	Shell/Linux wireless tools likely	Low	Needs script-level reading

Detailed project notes

allbrowserinstallkali

Category: Web / Linux tooling | Technologies: Shell, Kali Linux, browser install automation | Confidence: Medium | Use: Supporting utility

Documentation basis: README previously minimal

Kali-oriented browser installation repository. It belongs to the practical Linux workstation tooling family: repeatable setup, browser tooling, and local environment preparation. The current public README information observed earlier was too small to support a deeper claim without script-level reading.

analyseBrave

Category: System / Browser diagnostics | Technologies: Shell, Linux process/browser inspection | Confidence: Low | Use: Needs script-level reading

Documentation basis: README title-only

Repository intended around Brave Browser analysis. It should be treated as a system/browser diagnostic utility until the scripts are read. It should not be over-sold as a complete security framework from the README alone.

analyseProcess

Category: System diagnostics | Technologies: Shell, Linux process inspection | Confidence: Low | Use: Needs script-level reading

Documentation basis: README title-only

Repository intended around Linux process analysis. The README observed earlier was not descriptive enough, so the safe portfolio framing is process inspection and diagnostic support, pending script-level verification.

braveVTTextension

Category: Local AI / Browser extension | Technologies: JavaScript, Brave/Chromium Extension, Manifest V3, whisper.cpp, Shell | Confidence: High | Use: Strong portfolio item

Documentation basis: README and WHY exploitable

Brave browser extension for local voice-to-text workflows using a locally running whisper.cpp server. It handles browser-side recording, local transcription, insertion into web text fields, silence detection, and optional automatic ENTER behavior. It demonstrates privacy-first local AI integration, browser extension development, and productivity automation.

braveVTTextension_en

Category: Local AI / Browser extension | Technologies: JavaScript, Brave/Chromium Extension, Native Messaging, whisper.cpp | Confidence: High | Use: Strong portfolio item

Documentation basis: README exploitable

English/advanced version of the Brave voice-to-text extension with floating widget behavior, model selection, server status monitoring, native messaging support, focus tracking, and local Whisper integration. It is a strong example of local AI workflow integration directly inside a browser.

catall

Category: Utility / Documentation support | Technologies: Shell likely | Confidence: Low | Use: Needs script-level reading

Documentation basis: Metadata-only README

Utility repository whose README was metadata-only. From the name and usage context, it likely supports concatenating or collecting repository file content for review, but the final description must be based on actual script inspection.

checkdeepdisk

Category: Storage diagnostics | Technologies: Shell, disk tools, SMART/read checks | Confidence: High | Use: Strong portfolio item

Documentation basis: README and WHY exploitable

Safety-first disk scan repository with non-destructive read-only checks by default and guarded destructive paths requiring explicit flags and confirmation. It demonstrates cautious storage diagnostics, dry-run operation, structured logs, result artifacts, and operational discipline for disk-level work.

cmd.airmon-to-dos

Category: Wi-Fi security auditing | Technologies: Shell, Aircrack-ng, airodump-ng, deauthentication test workflows | Confidence: High | Use: Strong portfolio item

Documentation basis: README exploitable

Wi-Fi auditing script built around the Aircrack-ng suite. It checks prerequisites, runs scan cycles, detects access points and clients from capture outputs, supports real or simulated deauthentication tests, reprocesses CSV files, and generates logs and reports. It must be framed as authorized lab/security testing tooling.

cmd.disable_brol_notneeded

Category: Linux cleanup / System tuning | Technologies: Shell likely, Linux services | Confidence: Low | Use: Needs script-level reading

Documentation basis: README title-only

Repository name indicates tooling to disable unnecessary services or desktop/system noise. The README is not descriptive enough; it should be documented after reading the script so the portfolio does not invent behavior.

ColtSivers

Category: AI project bootstrap / Architecture | Technologies: Python, Pipenv, Shell, structured project layout | Confidence: High | Use: Strong portfolio item

Documentation basis: README and WHY exploitable

Bootstrap and structure foundation for RikHunter-style projects. It initializes a standardized project tree, optional external data storage, symlinks, Pipenv environment elements, and status notes. It demonstrates safe project industrialization, reproducible layout, dry-run-first behavior, and disciplined architecture setup.

compressvideo

Category: Multimedia utility | Technologies: Shell, ffmpeg likely | Confidence: Low | Use: Supporting utility

Documentation basis: README title-only

Video compression repository. The README observed earlier only contained the title, so a detailed description requires script-level inspection. It can be grouped as multimedia automation rather than highlighted alone.

convdocx

Category: Documentation automation | Technologies: Shell, Pandoc, Python helper | Confidence: High | Use: Strong portfolio item

Documentation basis: README and WHY exploitable

Markdown-to-DOCX conversion utility designed for repositories with custom metadata blocks and rendering issues. It recursively converts Markdown while preserving source files, supports no-overwrite and backup modes, logs/reporting, exclusions, and preprocessing through Python before Pandoc conversion.

cpx

Category: Utility / File operations | Technologies: Shell likely | Confidence: Low | Use: Needs script-level reading

Documentation basis: Metadata-only README

Small utility repository likely related to copy operations. The observed README was metadata-only, so it should not be described beyond file-operation utility until scripts are inspected.

create_gitignore

Category: Developer tooling | Technologies: Shell, template-driven .gitignore generation | Confidence: High | Use: Strong utility item

Documentation basis: README exploitable

Template-based .gitignore generator with multi-template merge, dry-run mode, append mode, prerequisite checks, backups, logs, and generated documentation. It addresses repository hygiene and repeatable project bootstrap.

create_luks

Category: Security / Storage encryption | Technologies: Shell, cryptsetup/LUKS likely | Confidence: Low | Use: Needs script-level reading

Documentation basis: README title-only

Repository title indicates a LUKS encrypted volume creation helper. Because the README was not descriptive, script-level inspection is required before claiming exact behavior or safety controls.

create_repo

Category: GitHub automation | Technologies: Shell, Git, GitHub CLI | Confidence: High | Use: Strong portfolio item

Documentation basis: README and WHY exploitable

Repository lifecycle bootstrap tool that creates local repositories, manages README/.gitignore, initializes Git, creates GitHub remotes through gh CLI, sets up branches, commits/pushes, and includes deletion workflows with confirmation and backups. Strong DevOps automation example.

dashboard

Category: Linux monitoring / TUI | Technologies: Python, Textual, Rich, psutil, Shell, systemd | Confidence: High | Use: Strong portfolio item

Documentation basis: README and WHY exploitable

Real-time Linux TUI dashboard for system metrics, interfaces, hotspot services, Tapo reachability, Tailscale status, journal logs, and iptables alerts. It demonstrates Python TUI development, Linux integration, service deployment, and practical operational visibility.

DeepEcho

Category: Audio / AI experiment | Technologies: Unknown from README | Confidence: Low | Use: Needs script-level reading

Documentation basis: README title-only

Repository title indicates an audio or AI-related experiment. The README was title-only, so the final portfolio description must be derived from actual repository files.

DeepEcho_whisper

Category: Local AI / Transcription | Technologies: Shell, Python, whisper.cpp, OpenAI Whisper, ffmpeg, C/C++ build tooling | Confidence: High | Use: Strong portfolio item

Documentation basis: README and WHY exploitable

Local transcription toolkit for converting video/audio into text and subtitle outputs. It installs Whisper tooling, builds whisper.cpp, validates models, extracts audio with ffmpeg, supports batch processing, and produces TXT/SRT/VTT artifacts. Strong privacy-first local AI workflow.

diff_files_not_copied

Category: File integrity / Backup support | Technologies: Shell likely | Confidence: Low | Use: Needs script-level reading

Documentation basis: README title-only

Repository likely supports comparison of files not copied during backup or migration operations. The README was not descriptive enough; script inspection is required.

findgit

Category: Git utility | **Technologies:** Shell likely, Git filesystem discovery | **Confidence:** Low | **Use:** Needs script-level reading
Documentation basis: README absent/not found

Repository name indicates a utility to find Git repositories. It should be documented from scripts before use in a portfolio.

firefoxVTTextension

Category: Local AI / Browser extension | **Technologies:** JavaScript, Firefox Extension, whisper.cpp, Shell | **Confidence:** High | **Use:** Strong portfolio item
Documentation basis: README exploitable

Firefox version of the local voice-to-text browser workflow. It records audio, connects to a local whisper.cpp server, transcribes speech locally, and inserts text into focused fields. It demonstrates cross-browser adaptation of privacy-first local transcription.

init_project

Category: Project bootstrap / Local AI services | **Technologies:** Shell, Pipenv, FastAPI-ready Python layout | **Confidence:** High | **Use:** Strong utility item
Documentation basis: README and WHY exploitable

Lightweight bootstrap structure for local AI/LLM and Python service projects. It creates documentation/source/data/log/output/result/script/deploy/testing directories, vector/model symlinks, Pipenv environment, starter Python files, and .gitignore rules.

iptables

Category: Linux firewalling | **Technologies:** Shell, iptables, systemd | **Confidence:** High | **Use:** Strong portfolio item
Documentation basis: README exploitable

Firewall deployment repository containing an iptables rule script, a systemd unit, and an installer. It demonstrates practical Linux firewall policy deployment, startup integration, permissions, and repeatable host hardening.

jeronomo

Category: Network scanning containment | **Technologies:** Shell, Nmap, Zenmap, iptables owner match, systemd, sudoers | **Confidence:** High | **Use:** Strong portfolio item
Documentation basis: README and WHY exploitable

Operational toolkit to run Nmap/Zenmap scans under a dedicated service account while keeping the main firewall baseline intact. It uses owner-based iptables overlay rules, wrappers, sudoers policy, and systemd lifecycle management for controlled scanning.

kali-deep-analyse-timeframe

Category: Forensics / Log analysis | **Technologies:** Shell/Python likely, Linux logs, timeline reconstruction | **Confidence:** High | **Use:** Strong portfolio item
Documentation basis: README exploitable

Forensic-grade timeframe analysis concept and tooling around extracting maximum evidence from heterogeneous local artifacts strictly inside a user-defined past interval. It focuses on logs, runtime traces, service files, timeline reconstruction, correlation, and expert reporting.

ManInTheMiddle

Category: Network security lab / Traffic capture | **Technologies:** Shell, hostapd, dnsmasq, iptables, systemd, Linux networking | **Confidence:** High | **Use:** Strong portfolio item

Documentation basis: README and WHY exploitable

Multi-interface Linux traffic capture router supporting 5 GHz Wi-Fi AP, 2.4 GHz Wi-Fi AP, and Ethernet gateway modes. It integrates hotspot creation, DHCP/DNS, firewall/NAT, systemd services, runtime profiles, logs, and documentation.

mountVG

Category: Storage / LVM helper | **Technologies:** Shell, LVM/LUKS likely | **Confidence:** Low | **Use:** Needs script-level reading

Documentation basis: Metadata-only README

Repository name indicates volume group mounting support. The README was metadata-only, so details must come from script-level inspection.

mp4_to_images_per_second

Category: Multimedia utility | **Technologies:** Shell, ffmpeg likely | **Confidence:** Low | **Use:** Supporting utility

Documentation basis: README title-only

Repository title indicates extraction of images from MP4 at a per-second cadence. It should be grouped under multimedia automation until scripts are inspected.

non_destructive_ntfs_audit

Category: Storage diagnostics / Evidence collection | **Technologies:** Shell, smartctl, lsblk, dd, hdparm, hashing, NTFS tools | **Confidence:** High | **Use:** Strong portfolio item

Documentation basis: README and WHY exploitable

Non-destructive NTFS audit workflow for Linux. It combines partition inventory, SMART data, read benchmark sampling, integrity hashing, optional guarded write/read validation, technical reports, and human-readable summaries.

NoXoZ4Hunt

Category: AI project bootstrap / Recruitment workflow | **Technologies:** Shell, Python/FastAPI bootstrap | **Confidence:** Medium | **Use:** Useful but early-stage

Documentation basis: README exploitable

Bootstrap repository for a local, on-premise AI project structure focused on private recruitment workflows. It currently contains initialization scripts and high-level design documentation rather than a complete runtime implementation.

NoXoZVorteX

Category: AI conversation analysis | **Technologies:** Python, JSON processing, Mistral API optional, tiktoken, CSV/TXT reports | **Confidence:** High | **Use:** Strong portfolio item

Documentation basis: README exploitable

Python tool for extracting, centralizing, and analyzing exported AI conversations from ChatGPT, LeChat/Mistral, and Claude. It supports format detection, duplicate detection, long conversation splitting, local/API analysis, parallel processing, and reports.

NoXoZVorteX_prompted_en

Category: Prompt-based AI analysis | **Technologies:** Python, Mistral API, prompt templates, JSON/CSV/TXT/Markdown exports | **Confidence:** High | **Use:** Strong portfolio item

Documentation basis: README and WHY exploitable

Command-line prompt executor for exported AI conversations. It applies reusable prompts to ChatGPT/Claude/LeChat exports, handles split/dedup controls, supports simulation, and writes structured outputs in multiple formats.

Overlook_record_cam

Category: Multimedia capture / Evidence recording | Technologies: Shell, ffmpeg, ImageMagick, PulseAudio, X11 | Confidence: High | Use: Strong portfolio item

Documentation basis: README and WHY exploitable

Long-running Linux desktop/audio recorder with segmentation, optional microphone mixing, post-processing filters, motion-detection snapshots, device discovery, delete/restore workflows, logs, and results. Useful for review, evidence, and operational recording.

poc_mistral

Category: AI proof of concept | Technologies: Unknown / empty repository | Confidence: High | Use: Do not highlight

Documentation basis: Repository empty when checked

Repository was observed as empty through the connector. It should not be used as a portfolio item unless content is added or local files differ from remote.

purgeaudio

Category: Audio cleanup | Technologies: Shell likely | Confidence: Low | Use: Needs script-level reading

Documentation basis: README title-only

Repository title indicates audio cleanup or reset tooling. It requires script-level inspection before description.

QEMU-tapo

Category: Virtualization / Android testing | Technologies: Shell, QEMU, KVM, Android-x86/BlissOS workflow | Confidence: High | Use: Strong utility item

Documentation basis: README and WHY exploitable

Android VM lifecycle automation for Linux using QEMU/KVM, with a TAPO-oriented testing workflow. It supports prerequisite checks, dependency installation, disk creation, installer boot, VM boot, stop, purge, dry-run, logs, and results.

rasperry

Category: Raspberry Pi / Kali ARM setup | Technologies: Shell, Kali ARM SD card configuration, secrets handling | Confidence: High | Use: Useful portfolio item

Documentation basis: README and WHY exploitable

Offline Kali ARM SD card preparation workflow for Raspberry Pi 3 Model B. It externalizes secrets, automates user hardening, SSH setup, Wi-Fi configuration, logs, results, and dry-run behavior.

rasperry-bt-scan

Category: Bluetooth / Raspberry Pi | Technologies: Shell likely, BlueZ tools likely | Confidence: Low | Use: Needs script-level reading

Documentation basis: Minimal README

Repository appears related to Raspberry Pi Bluetooth scanning, but the README was minimal. Use the better documented rasperry-scanbt as the main Bluetooth portfolio item unless this repo is updated.

rasperry-micro

Category: Audio monitoring / Raspberry Pi | Technologies: Shell, ALSA/audio tools, Linux CLI | Confidence: High | Use: Strong utility item

Documentation basis: README and WHY exploitable

Command-line audio monitoring repository for Raspberry Pi/Linux. It supports microphone listing, threshold-based monitoring, alerts, simulation, prerequisites, install, stop, purge, and several experimental script generations.

rasperry-multiboot

Category: Raspberry Pi multiboot | Technologies: Shell, U-Boot, QEMU, Linux partitioning, distro configs | Confidence: High | Use: Strong portfolio item

Documentation basis: README and WHY exploitable

Toolkit to build and validate a multi-OS SD card for Raspberry Pi 3 with a 16-partition layout, per-distribution configuration, U-Boot/firmware deployment, Kali Wi-Fi driver support, and QEMU validation.

rasperry-post-install

Category: Raspberry Pi post-install | Technologies: Shell likely | Confidence: Low | Use: Needs script-level reading

Documentation basis: Minimal README

Repository title indicates Raspberry Pi post-install automation. The README is too small to describe accurately without reading scripts.

rasperry-scanbt

Category: Defensive Bluetooth monitoring | Technologies: Shell, BlueZ, bluetoothctl, btmgmt, btmon, bluelog | Confidence: High | Use: Strong portfolio item

Documentation basis: README exploitable

Defensive Bluetooth scanning and logging project for Kali on Raspberry Pi. It aims to detect Bluetooth Classic and BLE devices, log names/MAC/RSSI/timestamps, classify known/unknown devices, support proximity heuristics, and remain strictly non-offensive.

rasperry-utils

Category: Raspberry Pi utility | Technologies: Shell | Confidence: Medium | Use: Supporting utility

Documentation basis: README exploitable but short

Raspberry Pi utility repository focused on exporting SD-card-related configurations. It includes an export script and companion documentation files.

RikHunter

Category: Local-first AI platform | Technologies: Python, FastAPI, Uvicorn, SQLite, ChromaDB, Docker Compose, optional Ollama | Confidence: High | Use: Strong portfolio item

Documentation basis: README exploitable

Local-first FastAPI platform for CV ingestion, vector indexing, document generation, SQLite inspection, monitoring, and admin routes. It demonstrates backend architecture, local AI infrastructure, vector database integration, and structured project bootstrapping.

rtl88x2bu-kali-driver-tools

Category: Kernel/driver operations | Technologies: Shell, DKMS/kernel module workflow, initramfs-related validation | Confidence: High | Use: Strong portfolio item

Documentation basis: README, WHY, SPEC global exploitable

Autonomous Kali tooling layer for rtl88x2bu driver operations. It separates source driver code from operational install/status/validation/reversal tooling, keeps local artifacts, logs, backups, and provides safety-first driver lifecycle management.

scan_security

Category: Security scanning | Technologies: Shell likely | Confidence: Low | Use: Needs script-level reading

Documentation basis: README title-only

Repository title indicates security scanning utilities. The README is not enough; scripts must be inspected before making claims.

scripts-wifi-scan

Category: Wi-Fi discovery | Technologies: Shell, Aircrack-ng, airodump-ng | Confidence: High |
Use: Strong utility item
Documentation basis: README exploitable

Wi-Fi scanning toolkit for Kali Linux. It switches an interface into monitor mode, launches airodump-ng, writes CSV/PCAP outputs, restores managed mode, handles interruptions, and fixes ownership of generated artifacts.

speechbrave

Category: Speech/browser experiment | Technologies: Unknown from README | Confidence: Low |
Use: Needs script-level reading
Documentation basis: Metadata-only repeated README

Repository name indicates Brave/speech-related tooling, but the README contained repeated metadata only. It should be documented from source files before portfolio use.

ssh_hardening

Category: Linux hardening / SSH access control | Technologies: Shell, OpenSSH, systemd, iptables, sudoers |
Confidence: High | Use: Strong portfolio item
Documentation basis: README and WHY exploitable

Portable and reversible SSH server deployment and hardening toolkit. It separates SSH installation, daemon hardening, firewall overlay, and shared configuration. It supports security levels, allowed users, Match Address blocks, ListenAddress, validation, logs, results, and reversible removal.

syncgit

Category: Git automation / DevOps | Technologies: Shell, Git, GitHub CLI | Confidence: High |
Use: Strong portfolio item
Documentation basis: Uploaded README and WHY templates

Multi-repository Git maintenance tool that recursively scans repositories and supports sync, custom commands, pull workflows with backup branches, read-only audits, extended diff logs, visibility listing, and AGENTS policy propagation. Strong DevOps/repository governance example.

usb_enc

Category: Storage encryption / USB operations | Technologies: Shell, fdisk, cryptsetup/LUKS, ext4, mount/umount |
Confidence: High | Use: Useful but safety-sensitive
Documentation basis: README and WHY exploitable

USB partition management repository for a two-partition drive: ext4 helper partition and LUKS-encrypted data partition. It includes setup, mount, and unmount scripts. It must be framed with safety warnings because it can wipe a target block device.

voicelogin

Category: Authentication research / Local biometrics | Technologies: Python, Shell, PAM, LightDM, XFCE, SpeechBrain, Argon2id, Linux audio stack | Confidence: High | Use: Strong portfolio item
Documentation basis: README, WHY, SPEC global exploitable

Local Linux voice biometric login prototype combining speaker verification with PIN/code, without replacing standard username/password login. It emphasizes local processing, fail-closed behavior, reversible PAM/LightDM integration, venv-first Python policy, and security staging.

wlaninfo

Category: Wi-Fi diagnostics | Technologies: Shell/Linux wireless tools likely | Confidence: Low |
Use: Needs script-level reading
Documentation basis: Minimal README

Repository title indicates Wi-Fi information/diagnostic tooling. Its README was too small to provide a precise description without reading scripts.

LinkedIn positioning draft

Looking for a job does not mean being inactive. Over the last months, I kept building, testing, documenting, and automating across Linux/Kali, security, local AI, browser extensions, multimedia tooling, Raspberry Pi systems, storage diagnostics, and Git/DevOps workflows.

This portfolio is not just a pile of scripts: it reflects a working method - diagnose, formalize, automate, document, test, log, and make workflows reproducible.

The strongest public-facing themes are: Linux/Kali automation, security lab tooling, local AI workflows, privacy-first transcription, Git automation, system hardening, storage diagnostics, Raspberry Pi experimentation, and multimedia/audio-video processing.
